Since 01<sup>st</sup> june 2008, it was introduced Reach Regulation 1907/2006/CE on chemicals, with subsequent updates.

The purpose of the regulation is to launch a unique system of registration and evaluation of chemicals, existing and new , to ensure the EU Community principle of precaution to the use of these substances , in respect of workers , end users and the environment.

For this purpose, REACH regulation identifies the individuals involved and defines roles and responsibilities. In the REACH chain PGA srl is a ' downstream ' user. As such PGA srl has taken steps to inform and educate its suppliers in order to verify the desire to pre-register and then register the products we use for our applications.

Substance classified as SVHC:

**PGA srl DO NOT use raw materials and components containing SVHC substances.**

**All PGA srl Products DO NOT contain substances classified as SVHC.**

This declaration is valid and applicable to the various updates and new issues of the normative unless different specific indications.

We hope that this information can demonstrate how our company works with you to follow innovative ways and how it contributes effectively to achieve important goals for mutual success.

Best Regards

P.G.A. Srl
